

## Finding out if you have the .NET framework installed

Click on start> Control Panel  
This will bring up the below window

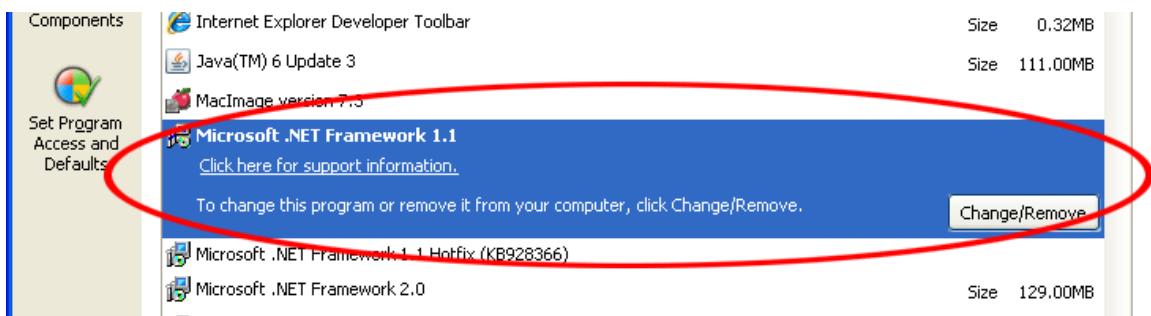

Click on Add / Remove programs

This will now bring up this window:

Make sure Microsoft .NET Framework 1.1 or Microsoft .NET Framework 2.0 (or a higher version) appears in the list of installed programs.

If this does not appear in the list of programs then you do not have Microsoft .NET Framework installed on your computer and will need to download the version of the Dashboard that contains the Microsoft .NET Framework.
